What can a business do to maximize the mobile buying power of the new impulse consumer? Gary Schwartz, a pioneer in mobile technology and marketing who has spent his career working with businesses to answer these questions, has written a groundbreaking book that outlines the history of the mobile industry and shows just how businesses can build up their mobile platforms to maximize online sales. But The Impulse Economy isn't just a book for businesses--it's also an eye-opening look into the ways our economy is changing every second of every day. Like Blink or The Tipping Point, the author looks at a phenomenon that's changing the way people behave and analyzing its roots and its causes. Anyone interested in the ways our behavior as shoppers is changing--and what we can do to better harness this opportunity--will find this book to be essential reading"--

The NSF Center for Intelligent Information Retrieval (CIIR) was formed in the Computer Science Department of the University of Massachusetts, Amherst, in 1992. Through its efforts in basic research, applied research, and technology transfer, the CIIR has become known internationally as one of the leading research groups in the area of information retrieval. The CIIR focuses on research that results in more effective and efficient access and discovery in large, heterogeneous, distributed text and multimedia databases. The scope of the work that is done in the CIIR is broad and goes significantly beyond `traditional' areas of information retrieval such as retrieval models, cross-lingual search, and automatic query expansion. The research includes both low-level systems issues such as the design of protocols and architectures for distributed search, as well as more human-centered topics such as user interface design, visualization and data mining with text, and multimedia retrieval. Advances in Information Retrieval: Recent Research from the Center for Intelligent Information Retrieval is a
collection of papers that covers a wide variety of topics in the general area of information retrieval. Together, they represent a snapshot of the state of the art in information retrieval at the turn of the century and at the end of a decade that has seen the advent of the World-Wide Web. The papers provide overviews and in-depth analysis of theory and experimental results. This book can be used as source material for graduate courses in information retrieval, and as a reference for researchers and practitioners in industry.
