Modalities and Multimodalities Sep 08 2019 In the last two decades modal logic has undergone an explosive growth, to thepointthatacompletebibliographyofthisbranchoflogic, supposing that someone were capable to compile it, would ?Il itself a ponderous volume. What is impressive in the growth of modal logic has not been so much the quick accumulation of results but the richness of its thematic developments. In the 1960s, when Kripke semantics gave new credibility to the logic of modalities? which was already known and appreciated in the Ancient and Medieval times? no one could have foreseen that in a short time modal logic would become a lively source of ideas and methods for analytical philosophers, historians of philosophy, linguists, epistemologists and
computer scientists. The aim which oriented the composition of this book was not to write a new manual of modal logic (there are a lot of excellent textbooks on the market, and the expert reader will realize how much we benefited from many of them). But too, every reader, even with no specific background in logic, a conceptually linear path in the labyrinth of the current panorama of modal logic. The notion which in our opinion looked suitable to work as a compass in this enterprise was the notion of multimodality, or, more specifically, the basic idea of grounding systems on languages admitting more than one primitive modal operator.

A general method for automatic computation of equilibrium compositions and theoretical rocket performance of propellants. Oct 02 2021 A general computer program for chemical equilibrium and rocket performance calculations was written for the IBM 650 computer with 2000 words of drum storage, 60 words of high-speed core storage, indexing registers, and floating point attachments. The program is capable of carrying out combustion and isentropic expansion calculations on a chemical system that may include as many as 10 different chemical elements, 30 reaction products, and 25 pressure ratios. In addition to the equilibrium composition, temperature, and pressure, the program calculates specific impulse, specific impulse in vacuum, characteristic velocity, thrust coefficient, area ratio, molecular weight, Mach number, specific heat, isentropic exponent, enthalpy, entropy, and several thermodynamic first derivatives.

**Minicomputer Research and Applications** May 17 2020 Minicomputer Research and Applications covers the proceedings of the First Conference of the HP/1000 International Users Group, held on August 25-27, 1980 in San Jose, California. The book focuses on the operations, applications, and functions of the HP/1000 computer driver. The selection first underscores an interactive color display station for IC layout and computer aided design in automatic control and logical automata. Discussions focus on automatic control, logical automata, organization of sirena, hardware and software configurations, interactive input support, and display processing. The text then examines a mini-based sculptured surface system and real-time performance analysis system for computers. The publication ponders on variations on a theme (RTE) by Hewlett-Packard, circumventing RTE system memory and disc
restrictions, and the Gerber data management system. Topics include user interface, system security, command file, implementation of shared-EMA, and real-time executive modifications. The manuscript also elaborates on ultra low level programming using a high level language and future directions of the HP/1000. The selection is a dependable reference for readers interested in the HP/1000 computer driver.

**Tionsphere** Jan 13 2020 For a million years, the human population was less than 26,000 people. By the year 2060, ten billion individuals crowded the planet. As humanity faced its greatest challenge, two global corporations merge to deliver a radical solution: the construction of concentric spheres encircling the world. For almost a thousand years, the new world was astonishingly empty, but as the tionsphere approaches capacity, its universal processing service starts to fail, threatening the lives of the obsessively-connected people. Caitlyn and her small team of contract theorists accept the impossible task of understanding why. They discover individuals who seemingly pre-date the tionsphere, including one who plans to destroy everything within Tion’s spheres. Pazel is intent on killing thousands of billions of people to preserve an elite population tailored to his own desires. Set on an immense scale, Tionsphere follows ordinary workers surviving in a world overflowing with people distracted by their technology and threatened by a life without it. “The tension is palpable, the dialogue complex and the artifice of life itself intelligently exposed by those who break the chain. For serious science fiction fans, Tionsphere marks the beginning of a complex new series with plenty to think about long after the intense reading experience is over, and it’s therefore highly recommended for hardcore fans of the genre.” – Readers’ Favorite

**Bases Abroad** May 09 2022 In this book Robert E. Harkavy analyses the modern status and the associated diplomacy of basing access, against the background of past political, military, and technological relationships. He provides a comprehensive description of the major powers' global basing networks, including their types, their locations, and the politics and economics of their acquisition. Professor Harkavy also gives details of the facilities the bases make available - naval, air, ground, missile, intelligence, communications, research and testing, environmental monitoring, and space-related - and provides a wealth of tables and maps depicting US and Soviet global networks. He analyses the roles of these bases for the USA, the USSR and other major powers, and discusses emerging political and technological developments which may alter basing diplomacy: the diffusion of power away from the superpowers, the increasing leverage of the smaller countries that host bases, the strengthened role of satellites in comparison with facilities on land and the possible impact of space defences on basing requirements. The crucial link between arms transfers and the politics of basing is emphasized, and the final section is devoted to the politics and economics of foreign military presence.
